

The Week 5 Software Engineering Project A weekly meeting will be held in **Room 4.21 (Ingkarni Wardli)** at **3:00pm on Wednesday 29th March 2017**.

# Agenda

**Chair: Christoph Treude**

## 1 Apologies

- none

## 2 Present

- Claudia Szabo
- Zeyu Lin
- Zeqi Fu
- Minhtam Phan
- Christoph Treude

## 3 Status update

We have done the UML diagram which is the ER-map for database, and we also done some User Interface draft design in last week. ER-Map based on UML diagram, User Interface based on web services. In this meeting we will show the UML and UI design without functional.

## 4 ER-Map design

After discussion, our group have designed a ER-Map preview. This preview give us overview of relationship between different tables, and for last meeting, we re-think about the critical question related to our data. We split the table by time. For example, if user want to search the data between 2001-2012 year, we just need search the table created for those years.

## 5 UI demo

User Interface is the mutual activity between human and machine. We need provide smart, succinct, usable UI design. In this meeting we need talk with our client, the UI requirement which components are suitable for this system. We will give client several options.

## 6 Other Issues

Based on this ER-map, do we need some modify ? Or any other suggestion in this stage? Next step, we may need analysis more critical question, and build up database and import the data from historical data file.

The next meeting is to be held in **Room 4.21 (Ingkarni Wardli)** at **3:00pm on Wednesday 29th March 2017**.
